Professional Experience

Tata Consultancy Services (TCS) - (Backend Developer)

Aug 2023 – Present | Bengaluru

Insurance Middleware System Development and Integration | JAVA, Spring Boot, JPA, IBM IID |

Client: HDFC Life

- Designed and implemented 10+ microservices and RESTful APIs using Java, Spring Boot to manage policy data, claims processing, and customer information within the middleware layer.
- Collaborated with a team of 10 developers and cross-functional teams to analyze requirements, design scalable solutions, and implement microservices architecture capable of handling over 100 thousand transactions per day, ensuring a scalable and resilient system resulting in a 15% increase in development efficiency.
- Integrated IBM IID for seamless communication between different system components, ensuring reliable data exchange and workflow management for over 100,000 transactions per day.
- Conducted thorough testing and debugging, reducing system errors by 20% and improving service uptime to 99.9%.
- Utilized SQL for database operations, including data retrieval, updates, and performance optimizations, managing databases with over 1 million records.
- Implemented best practices for database design and optimization, enhancing data handling and query performance, reducing query response times by 30%.
- Improved system efficiency and scalability, reducing response times for critical operations by 10%.

Developer Portal | AWS Services and Node Js

- Built a Developer Portal acting as a secure API gateway layer between backend microservices and external partners, enabling seamless API consumption.
- Implemented authentication and authorization (AWS Cognito, OAuth2, API keys, custom MFA) to control partner access.
- Designed API documentation, onboarding workflows, and self-service capabilities to improve partner integration experience.
- Optimized performance by integrating with API Gateway, CloudFront, and Lambda, reducing latency and enhancing scalability.
- Collaborated with backend teams to expose business APIs while ensuring compliance, rate limiting, and monitoring via CloudWatch & API Gateway analytics.

Education

B.Tech in Computer Science

2019 – 2023 | Kochi, India

School of Engineering, CUSAT (CGPA: 8.64)

Technical Skills

Data Structures And Algorithm: Proficient in Problem Solving

Programming Languages: JAVA(Core, Advanced), C++, SQL

Technologies/Frameworks/Libraries: Spring Boot, Hibernate/JPA, IBM IID, Node, Git, GitHub

Concepts: Data Structure and Algorithm, DBMS, Object-Oriented Programming, Multi-threading, Microservice Architecture, REST API

Utilized: AWS(EC2,S3, API Gateway Lambda, Cloudwatch, Cloudformation, Dynamo DB, Cognito)

Certificates

- Data Base Management System(NPTEL) 
- Mastering Data Structures & Algorithms Using C and C++ 
- Aws Cloud developer associate 

Personal Projects

Sorting Algorithm Visualiser

- Created a web application using HTML, CSS, Javascript to visualize how various sorting algorithms work.
- I have made this project to understand how the sorting algorithms work and through this project others can also get a deep understanding of various sorting algorithms.

Book Social Network

- Developed an interactive website where users can create profiles to share and their favourite books.
- Built RESTful APIs to power a social book-sharing platform, implementing features like user authentication, review posting, and activity feeds.
